

## Environmental Performance Data

At each plants' Transition in CO<sub>2</sub> emissions volumes, Water usage volume, Transition in total waste volume generated, VOC emissions released are as shown below;

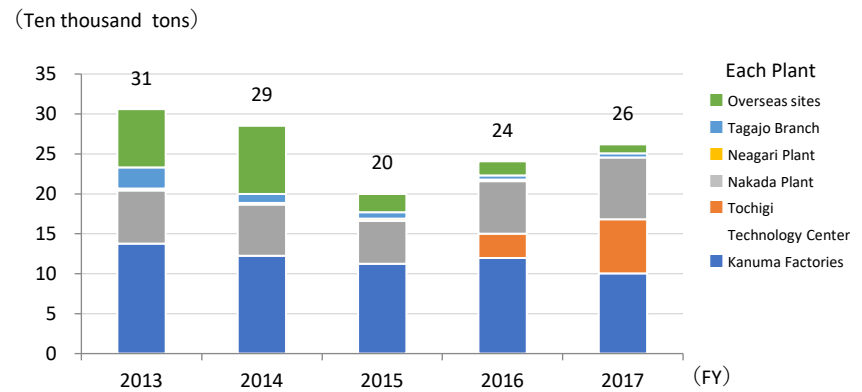

### Transition in CO<sub>2</sub> emissions volumes

Various CO<sub>2</sub> emissions reduction measures were implemented in fiscal 2017 including making capital investment, but the emissions volume increased over the previous year due to additional production volume.

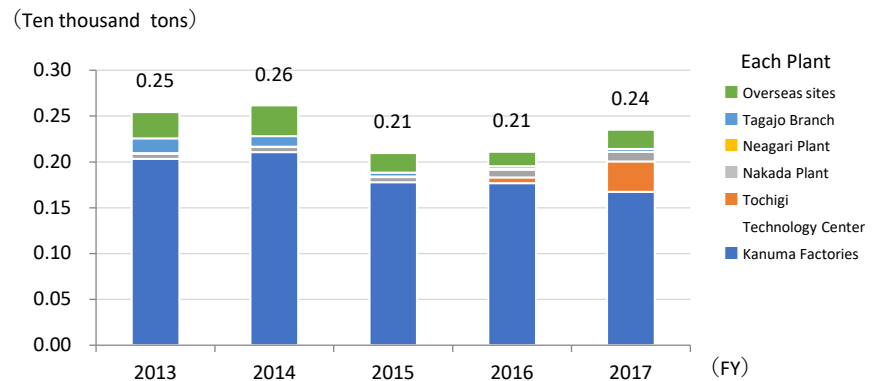

### Water usage volume

In fiscal 2017, although activities were conducted to conserve water, the volume increased over the preceding year due to an increase in production.

### Transition in total waste volume generated

In fiscal 2017, although measures were implemented for separation and recycling, etc., the volume increased over the preceding year due to the increased production volume.

### VOC emissions released
